## Part # P151X, Guy Hook Attachments

Guy Hooks are cast from high strength malleable or ductile iron. They provide an efficient and economical attachment for down guys. They are available in three styles. The integral spur style features spurs and teeth in the lower base to resist downslotting of the attachment. The lag screw style provides a hole in the lower base to secure the attachment from movement. The “hook only” style provides an economical attachment for light duty, 0° to 30° span applications. Hot dip galvanized.
